NTIS COMPUTER PRODUCTS CATALOG DATA SHEET

15. COMPUTER PRODUCT ABSTRACT

The Ada Compiler Validation Capability (ACVC) is a suite of tests designed to determine an Ada compiler's conformance to MIL-STD-1815A, the Ada Language Reference Manual (LMR). Version 1.10 was released in December 87 and will become the official ACVC version, replacing 1.9, in June 88. ACVC 1.10 will be the official version until June 89 when it will be replaced by ACVC version 1.11.

Each of the 3719 tests in the ACVC 1.10 is designed to test a single test objective specified in the Ada Implementer's Guide (AIG), a document enumerating the LRM into discrete test objectives in order to aid compiler development.

~~The ACVC 1.10 is written on 49 diskettes in MS-DOS format at nine sectors per track. Each test in the suite is named according to the compilation stage (compile, link, execute) analyzed and the section of the AIG, down to the specific test objective, covered.~~ Software Description: The model is written in the Ada programming language for implementation on a DEC VAX-11/780 computer using the VMS operating system. Memory requirement is 30 K bytes.

SUPPLEMENTAL INFORMATION

32. Use/Handling Constraints (Specify if Yes) The ACVC may be distributed to a domestic requester provided he signs a Statement of Terms and Conditions (ATCH 1). Foreign requesters from approved list (ATCH 2) may also be sent the ACVC provided they first complete and sign AF Form 349 (ATCH 3). A foreign requester not on approved list should be advised to submit his request for the ACVC through his country's embassy in Washington D.C.
